

Green Campus Policy

Major objectives of this policy are

1. Enhance green cover and biodiversity on campus.
2. Promote sustainable practices in energy, water, and waste management.
3. Reduce carbon footprint through efficient use of resources.
4. Foster environmental awareness and education among the campus community.

Attention shall be paid on

Green Cover and Biodiversity

Maintain and enhance green spaces, including gardens, lawns, and tree plantations, to promote biodiversity and provide a healthy environment. Conduct tree plantation drives and involve students and staff in maintaining the green cover on campus.

Energy Conservation

Install energy-efficient lighting and appliances in all campus buildings. Promote the use of renewable energy sources, such as solar panels, to reduce reliance on non-renewable energy. Encourage practices like turning off lights and electrical appliances when not in use. Promote the use of bicycles and walking within the campus to reduce vehicular emissions. Provide adequate parking facilities for bicycles and promote carpooling among students and staff.

Eco-friendly Practices

Maintain a plastic-free and tobacco-free campus to reduce environmental pollution. Encourage the use of reusable and eco-friendly materials for events and daily activities. Implement paperless administrative processes and promote digital communication to reduce paper consumption. Integrate environmental education into the curriculum to raise awareness among students about sustainability issues.

Monitoring and Evaluation

Establish a Green Campus Committee to oversee the implementation of green initiatives and evaluate their effectiveness. Conduct regular audits to assess energy, water, and resource usage and identify areas for improvement. Review and update the policy periodically to incorporate new technologies and best practices in environmental sustainability.
